INFORMATION FOR PATIENTS

Diagnostic Semen Analysis

What is Semen analysis?
Semen analysis is the microscopic examination of semen to see how many sperm cells are present and whether they function correctly.

What do I have to do?
Ensure that your referring doctor has given you a completed request form, sterile container and a specimen bag.

Telephone Cellular Pathology at King’s Mill Hospital on 01623 672382 to arrange an appointment to deliver your sample to the laboratory nearest to your home. You will need to take the semen sample to the laboratory within one hour of production.

We are unable to accept any samples without an appointment.

If you have any questions about the test then Cellular Pathology will be pleased to answer these for you.

Appointments at King’s Mill Hospital are available on Tuesday mornings and Thursday afternoons:

Cellular Pathology Department
King’s Mill Hospital
Mansfield Road
Sutton in Ashfield
Nottinghamshire NG17 4JL

Appointments at Newark Hospital are available on Monday mornings:

Pathology Department
Newark Hospital
Boundary Road
Newark Notts NG24 4DE

You are required to abstain from any sexual activity (masturbation or intercourse) for two to three days but no longer than seven days prior to your appointment date to ensure that the best sample is obtained.

How do I collect the sample?

1. Make sure that your full name and date of birth are written on the sample container and warm the container to body temperature in a trouser or internal jacket pocket for about ten minutes.

2. Be hygienic – wash your hands and genitals. Do not wash the container.

3. Collect all of the semen produced by masturbating directly into the sample container.

If any of the semen is spilt, you will need to tell the member of staff that receives your sample in the laboratory.
Do not use interrupted intercourse as you are very likely to miss the first part of the sample which contains most of the sperm.

Do not use a contraceptive sheath or wash out the container as this will spoil the sample.

4. Once the sample has been collected, please make sure that the lid is screwed on tightly. Write the time and date that the sample was collected on the container label and place the container in the specimen bag provided.

5. Ensure that you bring the fully completed request form with you to the laboratory as we are unable to accept your sample without this.

6. Please deliver the sample to the laboratory within one hour and attend as close to your appointment time as possible. We regret that if you are more than 30 minutes late we may not be able to perform your test as the sample may be too old to give accurate results. You should therefore give yourself ample time to arrive, especially if travelling by car as parking can sometimes be difficult.

7. Keep the sample close to the body in a trouser or internal jacket pocket whilst travelling to the laboratory as sperm are sensitive to extremes of temperature.

Where do I deliver the sample to?

The result of your test is dependent upon us receiving your sample within one hour so you must deliver it directly to the laboratory nearest to your home at your appointment time.

The Cellular Pathology Department at King’s Mill Hospital is found by following the signs to the Bereavement Centre and the MRI Scanner. The Department’s main door is situated to the right just as you turn off the main corridor towards the Bereavement Centre and the MRI Scanner. Please press the call button to the right of the door and a member of staff will come down to check your details and take your sample from you. There is a free 15 minute drop off/collection zone outside King’s Mill Hospital’s Main Reception and volunteers are available in the entrance foyer to give directions.

The Pathology Department at Newark Hospital is situated on the ground floor next to the Mercia Doughty Pre-operative Assessment Unit. When you arrive at Pathology you should take your sample to the delivery hatch at the reception. The staff will check your details and take the sample from you.

You are free to leave once you have handed in your sample as your results will be forwarded to your referring doctor.

Site maps and directions to King’s Mill Hospital and Newark Hospital can be found on the Sherwood Forest Hospitals NHS Foundation Trust website – please see ‘Further sources of information’.
How is my sample tested?
We examine a number of important factors that all contribute towards a man’s ability to father a child. These factors include the number of sperm present, how well the sperm are moving and the size and shape of the sperm.

How do I get my results?
Your results will normally be sent back to your referring doctor (GP or Consultant) approximately seven days after your test. Results are not given out over the telephone in order to protect patient confidentiality.

In some cases it may be necessary for you to produce a repeat sample for testing. This is not unusual and does not indicate a problem.

What happens to my sample after it has been tested?
Once we have tested your sample and sent a result back to your referring doctor, we incinerate the remaining fluid.

How do I know you provide a quality service?
The Trust’s Pathology Department is inspected by Clinical Pathology Accreditation Ltd. We participate in the UK National External Quality Assurance Scheme (for both Semen Analysis and Sperm Motility) where our performance is monitored against national benchmarks.
