As our understa	nding of COVID-19	•		and related gui	•

As our understanding of COVID-19 has developed, PHE and related guidance on required infection prevention and control measures has been published, updated and refined to reflect the learning. This continuous process ensures organisations can respond in an evidence based way to maintain the safety of patients, services users and staff.

This framework to help's providers assess themselves against the guidance as a source of internal assurance that quality standards are being maintained. It also helps identify any areas of risk and show the corrective actions taken in response. The tool therefore can also provide assurance to trust boards that organisational compliance has been systematically reviewed.

The current BAF has 10 domains with 121 key lines of enquiry. We are compliant with 119 key lines of enquiry. The 2 outstanding areas are:

- 1. The risk assessment of all patients for other infections
- 2. Covid-19 status being documented on the patients discharge letter

We have clear plans in place to address these areas although they are reliant on digital solutions
