

INFORMATION FOR PATIENTS, PARENTS, GUARDIANS AND CARERS

Blackflash overnight home sleep study

Your doctor has requested that we perform an overnight home multichannel sleep study.

This diagnostic test is usually performed to investigate breathing during sleep.

Test instructions

A sleep study involves collecting equipment to wear at home overnight while sleeping, and then returning the equipment following day.

The test is very simple and will involve wearing a small probe on your finger and a nasal cannula which has a microphone attached to it under your nose. These both connect to a small box which is worn around your chest.

The device will be set to automatically start to record at 11pm and will automatically turn off at 7am. It is therefore important to notify the Sleep Service if you have different sleeping patterns e.g., work nights etc., before the appointment to allow us to make appropriate amendments.

During the night of the test, please avoid the use of a television, fan, radio etc., as this will be recorded by the microphone and can affect the quality of the recording.

False nails and nail polish directly impact the study results and so should be removed prior to the study.

Relatives and carers may collect and return the device from the designated locker.

We ask that patients please complete the questionnaire which is provided in the box before returning the device.

What will I need to bring with me?

We advise you bring your appointment letter to gain access to your unique locker code.

Any additional information can be found on your appointment letter.

Results

A consultant will look at your sleep study and will write directly to you with the results. Any further tests or treatments required will be arranged as necessary.

Please note that you will not be given the results on the day of your test.

Contact details

Sleep Service

Telephone: 01623 672484
