

INFORMATION FOR PATIENTS

Duane's Retraction Syndrome

This leaflet describes Duane's retraction syndrome, its causes and possible treatment.

What is it?

Duane's is a congenital (from birth) condition. It is characterised by restriction of outward and/or inward movement of one or both eyes and possible face-turn to the affected side, i.e. restriction of the left eye from moving out is associated with a face-turn to the left.

There may also be changes in the eye fissure (i.e. the area between upper and lower eyelids), when looking to the sides.

There may or may not be a squint (a turn of one eye), when looking straight ahead.

This restriction of eye movements does not change over time.

What causes it?

It has been found that the nerves which supply the eye muscles are switching on at the wrong times, preventing the eye moving properly.

Is there any treatment?

A routine glasses check (refraction) will be carried out and glasses ordered if necessary, but usually no treatment is necessary. All that is required is monitoring of your child's vision until about the age of six or seven years.

If one eye has become lazy, occlusion therapy (patching) may be necessary to improve the vision in that eye. The orthoptist will advise on this treatment.

To improve the movement of the eye would involve physically altering the muscles. Surgical correction is very difficult and the outcome unpredictable. Surgery is only considered if the condition is causing problems.

What are the possible problems associated with Duane's syndrome?

A very noticeable head turn which is uncomfortable.

An exaggerated squint when looking straight ahead. Surgery would reduce the head-turn and/or improve the appearance of the squint, but it would still not make the eye move fully.

Occasionally, intermittent double vision may occur, usually in adulthood. If this does happen, and becomes a problem, a surgical approach may be needed, or special glasses can be used.

Contact details

If you have any queries please ring the Orthoptic Department:

King's Mill Hospital

01623 622515, extension 3365 or 6655
Monday to Friday, 9am-4pm.

Newark Hospital

01636 681681.
