Dedicated to Outstanding

INFORMATION FOR PATIENTS

Squint surgery - adults

This leaflet will explain what a squint operation involves and what to expect while you are in hospital. It also answers some frequently asked questions.

Before you come for surgery

You will attend for a pre-operative assessment a few weeks prior to having your surgery.

Before coming in for your surgery we will send you details about when to stop eating and drinking. This must be followed otherwise surgery will not be able to be carried out.

What does the operation involve?

You will have a general anaesthetic (i.e. will be asleep throughout the whole procedure). The surgeon will be operating on the muscles which move the eyes.

Everyone has six small muscles attached to the eye which move the eyes up and down and from side to side. By strengthening or weakening some of these muscles, a squint can be corrected.

The surgeon does this by shortening the muscle or by moving the position of the muscle.

For example if you have a convergent squint (where the eye turns in towards the nose), the surgeon will probably strengthen the muscle which pulls the eye out and weaken the muscle which pulls the eye in.

What happens afterwards?

On arrival back to the ward in the Day Case Unit you may have a pad over the eye for a short time. The eye/s will be very red afterwards but most of the redness does settle down within two to four weeks of the operation.

You will be given drops or cream to put in your eye following the operation. These help to reduce the inflammation (redness) and guard against any infection. They also ease any discomfort as you may have a gritty sensation and may find it difficult to open the eye for the first day after the operation.

How long will I be in hospital?

Usually, you will have the operation on the same day you come in, and go home later that day. You will have an appointment for pre-assessment as an outpatient the week before the operation and a post-operative appointment the day after your operation.

Please remember to bring your glasses to this appointment.

How long will I be off work?

The doctor will advise you, dependent on the operation and your working conditions. This will normally be around two weeks. You must not drive or do any heavy lifting until seen at your postoperative appointment.

What happens if I am in pain?

If you experience any pain, please take simple painkillers such as paracetamol or ibuprofen. If this continues please ring the department for advice, Monday – Friday from 9am to 4.00pm. Outside working hours please visit your local accident and emergency department.

Is the operation successful?

Usually the operation is very successful in straightening the eyes. However, some adults need more than one operation, especially if the squint is a very large one to begin with. Also, occasionally, the squint is overcorrected initially, but this usually settles at the most within a month or two. Very rarely further surgery is necessary to correct this.

Are there any problems?

As with all surgery there is a minimal anaesthetic risk. Your general health will be assessed at your preoperative assessment.

Contact details

If you have any queries about your treatment please ring the Orthoptic Department:

King's Mill Hospital

01623 622515, extension 3365 or 6655 Monday to Friday, 9am-4pm.

Newark Hospital

01636 681681.
