

INFORMATION FOR PATIENTS

Transvaginal ultrasound examinations

Your doctor has arranged for you to have a transvaginal ultrasound examination.

This scan is not always required but you still need to prepare for the examination. The sonographer will advise you when you arrive for your appointment.

This leaflet will help you understand what your scan involves.

Why do I need a transvaginal ultrasound examination?

A transvaginal scan can often show better detail of the pelvis which will tell your doctor more about your symptoms. If you are under 16, have not had sexual intercourse or have particular concerns about the procedure, it will not be carried out.

What is a transvaginal ultrasound examination?

The procedure is similar to an internal examination carried out in the clinic or GP surgery and allows us to see your pelvis in much greater detail. There is no special preparation for this test and you do not need to bring anything to hospital with you.

How do I prepare for this examination?

It is essential to have a full bladder for this examination. Please ensure you drink 1½ pints one hour before your appointment. If it is difficult for you to travel with a full bladder, please arrive early in the department and drink as much fluid as possible.

What will happen?

The sonographer or doctor will give a full explanation of what will happen.

You will be asked to give your permission before the examination is performed. The bladder can be emptied for this examination.

A special probe is covered with a condom and placed in the vagina. The scan will take approximately 15 minutes.

Please tell the sonographer if you have a latex allergy.

Can I have someone with me?

We can provide a chaperone, however, you can also bring someone to accompany you during the scan if you wish.

Is it painful?

The examination should be neither distressing nor painful and your privacy and dignity will be respected at all times.

What happens if my period is due?

If your appointment coincides with your menstrual period we can still perform the examination. It is quite normal for us to carry out transvaginal scans on women who are bleeding.

What happens after the transvaginal scan?

The results will be sent to the doctor who arranged the scan.

At the end of the scan the sonographer will inform you how to get your results.

Once the scan is complete you can leave the hospital

Where can I get more information?

If you have any queries or concerns, please do not hesitate to contact us on 01623 672238 between 8.30am and 5pm.
