INTRODUCING OUR NEW R&I DIRECTOR

My name is Liz Gemmill, I have been a Consultant UGI Surgeon at Sherwood Forest Hospitals for 4 years and am delighted to have taken over as Director of Research and Innovation. I feel research is key to improving patient quality of care and outcome, increasing patient satisfaction, as well as having benefits to the Trust. I am delighted to join such a dynamic, forward thinking team and hope to help embed research excellence as part of our culture in this trust.

NHS
EMRAD
East Midlands Radiology
Consortium

The Research Team Has...

...Facilitated a national survey trust wide, initially for female staff only but now open to all females who use our services.

It is to understand attitudes of the general public towards the use of Artificial Intelligence (AI) in breast cancer screening.

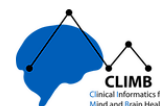

With your help we have recruited 1429 to date

**HAVE YOU COMPLETED
YOURS?**

If not, find a copy in your area, the KTC or follow the online link <https://ths2019.onlinesurveys.ac.uk/breast-screening-survey-public>

COMING SOON.....

CLIMB -The Health Data Consent Survey

An anonymous survey to establish patient and public views on the sharing of identified health data for clinical purposes and de-identified data for research within the UK.

This survey aims to improve care and support research.

We need your help, to give the opportunity to everyone over the age of 16 who walks through our doors to have their say.

Survey link will be provided to your area and across the Trusts Social Media

Thank you to those who supported us on our Research Day' in December

We raised a massive £407 for the gamma scanner appeal

#bepartofresearch

New Studies

See how these recently opened studies can benefit our patients...

Across the UK there are conflicting opinions as to whether fractured elbows are best treated with surgery or a cast. This study will evidence the best practice for long term outcomes for our children.

To help Colonoscopists improve performance by finding more polyps, hence preventing bowel cancers and reducing the risk of post-colonoscopy colorectal cancer

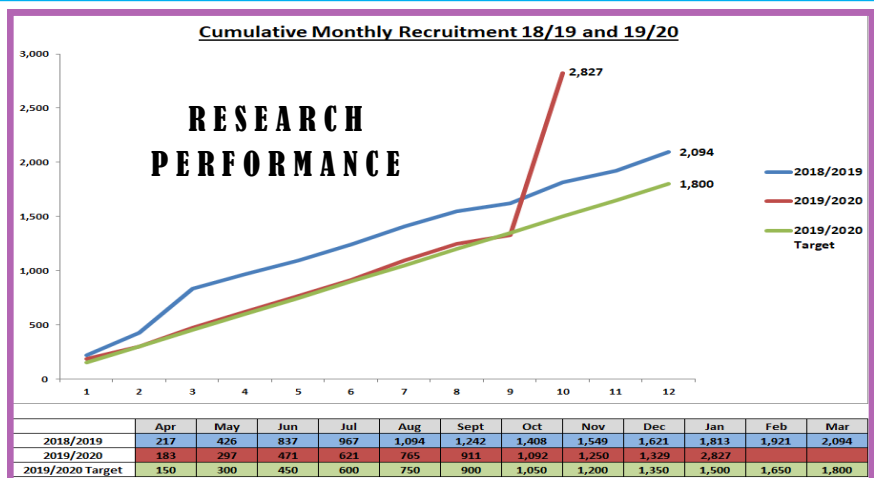

To identify the specific genes that cause some people to be susceptible to specific infections and consequences of severe injury. Identifying these genes will help to use existing treatments better, and to design new treatments to help people survive critical illness

Study Success

These studies have recently come to an end at SFH and have successfully recruited to time and target.

A big shout out and thanks must go to ED, Heart Failure Nurses Gail and Ali and the Chest Pain Nurses for all their help and support in identifying patients.

Want to get involved?

Speak to your research champions to find out which clinical trials and studies that are happening in your area now.
