Ankle range of motion exercises

If you are viewing this leaflet online, please click on the following link to watch information videos. If you have a paper copy, please copy the link into your browser:
<https://www.youtube.com/watch?v=rqiqjaxylJw>

- Sitting or lying down, move your affected ankle:
 - By pointing your toes forwards (away from you).
 - By pulling your foot and toes up (towards you).
 - Turning the sole of your foot inwards (to face your opposite foot).
 - Turning the sole of your foot outwards (facing away from your other foot).
 - Rolling your ankle around making circles – one way and then the other.
- You may find it helpful to use your hands to assist in moving your ankle, especially if it is particularly swollen and stiff.
- You could also use a towel – place it around the ball of your foot, holding both ends with your hands pull the towel so that you are pulling your toes backwards to face you.

This type of exercise is a 'range of movement exercise' therefore it is recommended that you do these exercises regularly throughout each day.

Allow pain to be your guide. You might find it easier to use either ice or heat during and/or after doing these exercises.
