

INFORMATION FOR PATIENTS

Small bowel capsule endoscopy

Capsule endoscopy assists in diagnosing gastrointestinal conditions, and involves ingesting a small (the size of a large vitamin pill) capsule, which contains a colour camera, battery, light source and transmitter. The camera takes two pictures every second for eight hours, transmitting images to a data recorder about the size of a small A6 size book that is held in a pouch around your shoulder and sits on your waist.

Once swallowed, the camera moves naturally through the digestive tract while you carry out your normal activities. Approximately eight hours after ingesting the capsule, you should return the recorder to the department for the images can be downloaded to a computer and evaluated. The capsule is disposable and will be excreted naturally in your bowel movement. In the rare case (0.75%) it will not be excreted naturally, it will need to be removed endoscopically or surgically.

Instructions prior, during and after the procedure

One week before the procedure

Stop any iron tablets you are taking.

The day before the procedure:

- **All** patients can have a normal breakfast and lunchtime, then **clear fluids only** until 10pm.
- **Diabetic patients** should take a **light** evening meal before 8pm (soup/sandwich with white bread).
- **All patients should not eat or drink** from 10pm until the start of the test.

The day of the procedure:

- Arrive at the department at the allocated time.
- We will ask you some questions and the recorder will be fitted.
- You will swallow the capsule with a small amount of water.
- You will be asked to go for a 30 minute walk, then return and we will ensure the capsule is progressing.

After you have swallowed the capsule:

- Do not eat or drink anything for two hours.
- After two hours you can start to drink clear fluids.
- After four hours you can eat a light snack.
- After eight hours, you can resume your normal diet.
- Until the capsule is passed, **do not** go near any powerful electro-magnet sources, for example MRI scanners and radio transmitters.
- **Do not** disconnect the equipment or remove the belt for the duration of the recording.
- **Please** take care of the equipment, damage could potentially mean the test may fail

- **During** the recording check **approximately every 15 minutes** that the small blue light is blinking twice per second. If this stops please contact the department on the numbers below and record the time.

If you experience any abdominal pain, cramping or other unfamiliar symptoms, please contact the relevant department on 01623 622515 an extension:

- **4076 for King's Mill Hospital**
- **5875 for Newark Hospital**
