INFORMATION FOR PATIENTS

Virtual macula follow up clinic

What is a virtual macula follow up clinic?

It is a clinic where trained eye clinic doctors/staff do tests to assess the macula condition. The macula is the centre of the retina used for detailed vision.

This service will help to make the macula service more efficient, so more patients can be seen at frequent intervals. It will also make your visit much quicker as you do not need to wait to see the doctor. You will receive the same standard of care as in regular clinics.

Who attends these clinics?

- Patients who are being treated for wet macular degeneration.
- Patients who have dry macular degeneration, but need monitoring.
- Patients with other macular conditions who might benefit from frequent monitoring.

What tests are done?

- Sight test
- Colour photograph of the macula
- OCT scan of the macula.

Will I have drops to dilate my pupils?

You may need drops to dilate the pupil, if the images are not clear. If you do, you cannot drive for several hours afterwards until the effect of the drops wears off.

How will I know my results?

The doctor/nurse specialist will look at your tests and will let you know the results within a couple of weeks.

If your macula is stable, you will receive another clinic appointment for you to be monitored. If the tests show that you need treatment, an appointment will be offered for an injection, which might be the same day or another day convenient for you.

If you have not heard about your results, please contact the eye clinic (details below).

Will I see a doctor?

Sometimes, the virtual clinic will run at the same time as the other clinics and a doctor may be available. If you need to see the doctor, please let the nurse know.

Please check with the nurse/doctor if you are able to attend your annual eye check with your opticians for any other eye conditions (such as glaucoma, cataracts, diabetic retinopathy screening etc.), when they are due.
