

INFORMATION FOR PATIENTS, PARENTS, GUARDIANS AND CARERS

Overnight oximetry study

Your doctor has requested that we perform an overnight home sleep study.

This test is performed to monitor your oxygen levels overnight while you sleep.

Test instructions

An overnight oximetry study involves collecting equipment to wear at home overnight while sleeping, and then returning the equipment the following day.

The test is very simple and will involve connecting a small probe to your finger and the device straps around your wrist like a watch. You will need to press a button to start the recording when you get into bed and turn it off the following morning when you get up using the same button.

Full fitting instructions will be in the box along with the questionnaires, which need to be completed.

False nails and nail polish directly impact the study results and so should be removed prior to the study.

Relatives and carers may collect and return the device from the designated locker.

What will I need to bring with me?

We advise you bring your appointment letter to gain access to your unique locker code.

Any additional information can be found on your appointment letter.

Results

A consultant will look at your sleep study and will write directly to you with the results. Any further tests or treatments required will be arranged as necessary.

Please note that you will not be given the results on the day of your test.
