INFORMATION FOR PATIENTS

Newark Hospital

PICC line service

Aftercare for your PICC line

Aftercare will be provided on the Medical Day Case Unit which is based on the Fernwood Unit, at Newark Hospital.

Looking after your PICC line

- When the PICC line is not being used, there is a slight risk of it becoming blocked. To stop this from happening, a small amount of fluid is flushed into the line using a syringe, usually done once a week.
- The caps or bungs at the end of the line need to be changed every week. If it gets wet or starts to peel off, it should be changed sooner.
- It is difficult to change the dressing with one hand so the nurses at the hospital will do this for you or arrange for a community nurse to visit you at home.

- When you are at home it is safe for you to have a shower or bath with your PICC line in, however, you will need a waterproof cover.
