

## INFORMATION FOR PATIENTS

---

# Undergoing an isotope scan – indium

**This examination is a two-part test with appointments on consecutive days**

---

We have been requested by your hospital doctor to arrange a white cell scan. This study is performed in our Nuclear Medicine department and enables us to search for sites of inflammation or infection in the body.

The aim of this leaflet is to explain what you can expect when you come for your nuclear medicine scan.

### **What is nuclear medicine?**

Nuclear medicine is a method of imaging the body using a gamma camera and using radiopharmaceuticals (radioactive 'dyes').

To look at the function of the body, nuclear medicine uses gamma rays. These are very similar to x-rays except gamma rays are produced by a radiopharmaceutical dye injected into the bloodstream.

The radiation dose is kept as low as possible, similar to an x-ray dose, which means it may take quite a long time to create the images.

### **What should I do if I cannot attend for the appointment?**

Please inform us as soon as possible on 01623 622515, extension 3284 or 3205, if you are unable to attend. A special injection will be prepared for your scan, which cannot be used on any other patient.

### **Am I suitable for an isotope scan?**

Most patients are suitable for an isotope scan. However, you **must** contact us on 01623 622515, extension 3284 or 3205 for advice if:

- You are pregnant
- There is any possibility that you may be pregnant
- You are breastfeeding
- You weigh over 30 stones (200 kilos).

### **How do I prepare for this scan?**

There are no restrictions regarding eating or drinking. If you are taking any medication, you may continue to take this as normal.

Please leave any valuables at home. You are responsible for all personal items you bring into hospital and the Trust cannot accept responsibility for their loss or damage.

**What happens during the scan?**

You will need to report to the reception desk in the main x-ray department, which is adjacent to the Emergency Department. From there you will be directed to the Nuclear Medicine department.

**Part 1:**

- At 9am a sample of blood will be taken from your arm.
- At 11am the blood sample will be re-injected into your arm.
- You are then free to leave the hospital but will be asked to return at approximately 3pm for the scan.
- You will be required to lie on the imaging couch while the scan takes place.
- The gamma camera will be close to you, without touching, but you will never be totally enclosed.
- This scan will take approximately one hour.

**Part 2:**

- You will be asked to return the following day at 11am for another scan.
- These times are only approximate as they may vary depending on your condition.

**Are there any risks to having an isotope scan?**

The benefit from the isotope scan outweighs the small risk from radiation.

The scan results will allow your consultant to make the correct treatment decision for you.

To avoid babies and children being exposed to unnecessary radiation, it is good practice to avoid prolonged contact with them for at least 12 hours following the injection.

**Can I drive after my scan?**

Yes, there is no restriction on driving after your scan.

**How do I get the results?**

When your scan is finished no instant diagnosis can be made. The images produced are recorded digitally and reviewed and a report sent to your referring clinician.

These results will be discussed with you by your referring clinician. If you have been referred from the hospital and have not received your follow-up appointment within four weeks please contact your consultant's patient coordinator.

If you have any concerns or require more information, please call 01623 622515, extension 3284 or 3205.

## **Your radiology records**

This Trust is part of a group of NHS hospitals in the East Midlands that have a shared NHS radiology system, which is used by our healthcare professionals to access your radiology records.

If necessary, your radiology records may also be accessed by healthcare professionals in other NHS hospitals in the East Midlands or NHS Service Providers, to ensure you receive consistent, safe and effective clinical care and treatment, irrespective of where you receive your care.

If you have any concerns about providing information or how we use it, please discuss this with radiology staff so that you fully understand the potential impact on your care or treatment.
