

INFORMATION FOR PATIENTS

Undergoing CT colonography (Omnipaque and Picolax)

You will need to collect a bottle of special preparation (Omnipaque) from x-ray reception at either King's Mill Hospital or Newark Hospital, between Monday to Friday, 9am to 5pm, **at least three days** before your appointment. Please bring your appointment letter with you.

Your consultant has advised you to have a CT scan. This leaflet aims to explain the procedure and answer any queries you may have.

CT stands for Computed Tomography and simply refers to the technology of the equipment. CT is a scanning technique which uses x-rays to produce cross-sectional images of the relevant part of the body. It can be used to diagnose many conditions and also monitor the success of treatment.

You will need to contact us if:

- Your weight exceeds 30 stones or 200 kilograms.
- You have an allergy to iodine.
- You are pregnant.
- There is any possibility that you may be pregnant.

If you need transport to the hospital please contact your GP to arrange this. Although the actual scan time is only 30 to 45 minutes, you will need to allow 1½ hours for this appointment.

Please leave any valuables at home. You are responsible for all personal items you bring into hospital and the Trust cannot accept responsibility for their loss or damage.

Important

You must follow the strict diet outlined on the attached sheet and take the Omnipaque and Picolax as instructed. This is to ensure your bowel is thoroughly clean for this examination.

If you have any questions regarding the preparation for this scan, please contact the CT department on 01623 622515, extension 3212.

Preparation for CT colonography

You will need to take the Omnipaque and Picolax on the day before your appointment.

You may experience frequent, loose bowel motions and diarrhoea within a few hours of the first dose, therefore, we advise you stay within easy reach of a toilet. If you become sore you may use a barrier cream, for example Sudocrem. Some abdominal discomfort can be expected.

Seven days before the procedure:

- Stop taking iron tablets.
- You may continue with all other medication including laxatives.

Four days before the procedure:

- Stop taking any drugs which cause constipation, for example: Lomotil (loperamide), Chlorpropamide and/or Codeine.

On the day before the procedure:

- Follow the instructions and diet information enclosed.

On the day of the procedure:

- Continue with clear fluids.

The procedure

You will be asked to change into a gown. A radiographer will take you into the scan room and explain the procedure to you in more detail. Should you have any worries the staff will put you at ease and answer all your queries.

You are required to lie on a couch which will move through the large 'doughnut' shaped scanner. Your body will never be totally enclosed, and you will be able to communicate with the CT staff through an intercom system. The scanner couch can be lowered and patients with mobility problems will be offered assistance.

For this scan it is necessary to insert a cannula – a small plastic tube through which an injection is given - into a vein in your arm. This will allow us to inject a special fluid called contrast medium to allow us to see the blood vessels more clearly. We will also use this cannula to inject a drug which relaxes the bowel.

A small tube will be inserted into the back passage to allow us to fill your bowel with air. You need to lie very still on your back while the scan is in progress, and we will ask you to hold your breath for a short time. We will then ask you to turn into different positions to enable us to do further scans.

Following the procedure

You may eat and drink normally. A high-fibre diet will help restore your normal bowel habit which will usually return within a couple of days.

Risks from the procedure

To minimise any risks, you will be asked a series of questions before the scan.

A small number of patients suffer allergic type reactions to the contrast medium so you will need to remain in the department for up to 20 minutes following your scan. Such reactions are usually minor and settle quite quickly without treatment.

The injection of the bowel relaxant may cause blurring of vision, but this normally clears within half an hour. Very rarely the injection can cause pain in the eye. If this does occur, contact your GP immediately.

Although x-rays are used to produce the images, a CT scan is considered to be a very safe procedure. Any slight risk from the use of x-rays is outweighed by the information provided by the scan.

Getting your results

When your scan is finished no instant diagnosis can be made. The images produced are recorded digitally and reviewed by a radiologist (an x-ray doctor) who then sends a report to your hospital consultant.

The results of your scan will be discussed with you at your next clinic appointment. If you have not received your follow-up appointment within four weeks please contact your consultant's patient coordinator.

Finally

We aim to see you at your appointment time but please remember emergency patients are scanned as priority. Should there be a delay the reasons will be explained to you.

Contact us

If you need any help before your appointment date you may contact the CT Department on 01623 622515, extension 3212.

Your radiology records

This Trust is part of a group of NHS hospitals in the East Midlands that have a shared NHS radiology system, which is used by our healthcare professionals to access your radiology records.

If necessary, your radiology records may also be accessed by healthcare professionals in other NHS hospitals in the East Midlands or NHS Service Providers, to ensure you receive consistent, safe and effective clinical care and treatment, irrespective of where you receive your care.

If you have any concerns about providing information or how we use it, please discuss this with radiology staff so that you fully understand the potential impact on your care or treatment.

CT colonography with Omnipaque and Picolax

Bowel preparation and diet instructions

Drink plenty of clear fluids throughout the day. Because your intake of food is limited you may require the occasional sugary drink.

Take your normal medication except as detailed in the instructions below **

On the day before your examination

At 7am:

- Drink the 1st bottle of 50ml Omnipaque liquid.

At 8am (breakfast):

- Take the first sachet of Picolax. Dissolve one sachet of Picolax in a cup of cold water (approximately 150ml). Stir for 2-3 minutes and then drink the solution. Sometimes the solution becomes warm as Picolax dissolves. If this happens, wait until it cools sufficiently before drinking it.

This meal should be limited to a boiled or poached egg, a slice of white bread with a scraping of butter or margarine. Tea and coffee may be taken but with **no** milk or cream.

**Take all normal medication, except Chlorpropamide, iron tablets and/or codeine, which should not be taken until after your scan.

Mid-morning

Drink plenty of clear fluids, including sugary drinks. Tea or coffee may be taken with **no** milk or cream.

At 12pm (lunch):

Drink the 2nd bottle of 50ml Omnipaque liquid before eating a lunch of:

- A 200g portion of steamed, poached or grilled white fish, chicken or tofu with two small (egg size) boiled potatoes or two slices of white bread. Jelly for dessert (this may contain sugar).

At 4pm

Drink the 3rd bottle of 50ml Omnipaque liquid. Take the second sachet of Picolax as above.

A mug of clear soup or Oxo/Bovril may be taken followed by a small portion of jelly (this may contain sugar). Continue to drink plenty of clear fluids, including sugary drinks. Tea or coffee may be taken with **no** milk or cream.

No solid food is to be eaten until after your scan. Continue to drink plenty of clear fluids.

If you are diabetic **do not take any further diabetic medication until after your scan. Continue to take all other normal medication as outlined above.
