

INFORMATION FOR PATIENTS

Undergoing a CT scan – chest, abdomen and pelvis – with full oral preparation

Your consultant has advised you to have a CT scan. This leaflet aims to explain the procedure and answer any queries you may have.

CT stands for Computed Tomography and simply refers to the technology of the equipment. CT is a scanning technique which uses x-rays to produce cross sectional images of the relevant part of the body.

Please contact the CT department on 01623 622515, extension 3212, if:

- Your weight exceeds 30 stones (200 kilograms)
- You are pregnant or there is any possibility that you may be pregnant.

If you need transport to the hospital please contact your GP to arrange this. Although the actual scan time is only 15 to 30 minutes, you will need to allow at least two hours for this appointment.

Please leave any valuables at home. You are responsible for all personal items you bring into hospital and the Trust cannot accept responsibility for their loss or damage.

Preparation

You may eat, drink and continue with any medication as normal.

On arrival you will be asked to drink some special fluid (Gastrografin) over a one hour period. This fluid makes your CT scan easier to interpret.

The procedure

You may be asked to change into a gown. A radiographer will take you into the scan room and will explain the procedure to you in more detail.

Should you have any worries the staff will put you at ease and answer any questions you may have.

A CT scan is not painful; all you are required to do is lie on a couch which then moves through the large 'doughnut' shaped scanner. The scanner couch can be lowered and patients with mobility problems will be offered assistance.

Your body will never be totally enclosed and you will be able to communicate with the CT staff through an intercom system.

For this scan it may be necessary to insert a cannula (a small plastic tube) into a vein in your arm.

This allows us to inject a special fluid called contrast medium which helps us to see blood vessels more clearly. The injection may give a warm sensation throughout the body but this soon passes.

You need to lie very still whilst the scan is in progress and we may ask you to hold your breath for a short time.

Risks from the procedure

To minimise any risks you will be asked a series of questions before the scan.

A small number of patients suffer allergic type reactions to the contrast medium.

If you have had an injection of contrast medium you will need to remain in the department for up to 20 minutes following your scan. Such reactions are usually minor and settle quite quickly without treatment.

Very occasionally a small amount of the contrast medium may leak out of the vein into the surrounding tissue. You may experience some swelling and redness around the site of the injection.

Your examination will be performed using the minimum amount of radiation necessary to produce the images needed to help your doctor diagnose your illness, injury or monitor the progress of treatment.

We make sure the benefits from having the examination outweigh the very low risk involved.

Getting your results

When your scan is finished no instant diagnosis can be made. The images produced are recorded digitally and reviewed by a radiologist (x-ray doctor) who then sends a report to your hospital consultant.

These results will be discussed with you the next time you are in clinic. If you have not received your follow-up appointment within four weeks please contact your consultant's patient coordinator.

Finally

We aim to see you at your appointment time but please remember emergency patients are scanned as priority. Should there be a delay the reasons will be explained to you.

Contact us

If you need any help before your appointment date you may contact the CT Department on 01623 622515, extension 3212.

Your radiology records

This Trust is part of a group of NHS hospitals in the East Midlands that have a shared NHS radiology system, which is used by our healthcare professionals to access your radiology records.

If necessary, your radiology records may also be accessed by healthcare professionals in other NHS hospitals in the East Midlands or NHS Service Providers, to ensure you receive consistent, safe and effective clinical care and treatment, irrespective of where you receive your care.

If you have any concerns about providing information or how we use it, please discuss this with radiology staff so that you fully understand the potential impact on your care or treatment.
