INFORMATION FOR PATIENTS, PARENTS, GUARDIANS AND CARERS

Discharge advice
Adenoidectomy

Surgery for adenoidectomy is usually done as a day case admission to the ward, occasionally your child or young person may need to stay in overnight. The following information may help in care after surgery.

After surgery

A small number of children find their voice sounds different after having adenoids removed. This should settle after a few weeks.

Your child or young person may also complain of a blocked nose, again this will settle after a couple of weeks.

Pain relief

Give regular pain killers for the first few days. Do not use more than it says on the label.

Your child or young person last had pain relief at:

Paracetamol

Ibuprofen

Eating and drinking will help any pain get better quicker. Chewing gum/sweets may also help with pain.

After surgery activities

Your child or young person will need to be off school for 10-14 days, avoid crowds of people and smoky places. Try to keep away from people with coughs or colds.

Bleeding

Bleeding can be very serious, if you notice any from your child's or young person's throat or nose you must see a doctor. Take your child to the nearest accident and Emergency Department to be checked out.
