Healthier Communities, Outstanding Care

Pregnancy of unknown location

Information for patients and their partners

Following your scan today, it has not been possible to tell you if your pregnancy is definitely situated in the uterus or progressing normally. This is often the case in early pregnancies and it may well result in the outcome being a normal viable pregnancy, but it is just too early to see on scan at the first visit.

We appreciate this is a very anxious time for you and we will keep you informed and give you an answer as soon as possible.

There are four main reasons we cannot give you a definite answer at your first visit:

- 1. Your pregnancy is too early to see on a scan.

 If the uterus appears empty or only a small sac is seen, it may well be the first sign of a viable pregnancy, but if there are no contents within the sac, then we cannot confirm viability or location at this point. However many pregnancies will be successful and develop normally.
- 2. You have completely miscarried, particularly if you have had history of a heavy bleed, but your pregnancy test is still positive because your hormone levels are still falling.
- 3. Your pregnancy has stopped growing at an early stage particularly if you expected to be a lot further on in the pregnancy. (Sac only).
- 4. The pregnancy is growing outside the womb (ectopic) this is much less common but has to be ruled out. Around ten percent of pregnancies are ectopic. Blood tests may help us give you more information to how your pregnancy is progressing. We will ask to check your Bhcg (pregnancy hormone levels) over 48/96 hours. These should rise by approximately 63%. If this occurs then we will be more confident about the location and viability of your pregnancy. We will then arrange a follow up scan at the best interval to give you a definite answer.

If the levels fall by 50% or more, sadly we know this pregnancy is failing and will discuss management (if any) is needed.

Pregnancy of unknown location

If the blood tests are static or rise or fall less than expected, then we are a little more concerned about the location, but even then most ladies will not have an ectopic pregnancy. If you feel you need further information please speak to Early Pregnancy Unit staff.

Follow up appointment in EPU:
