

## Who should be contacted if I have any further questions?

If you have any further questions about the AMBER care bundle or would like more information, you can discuss this with your nominated nurse.

Alternatively, you could discuss the AMBER care bundle with the ward sister, charge nurse, or a member of your medical team.

# A guide for patients and those important to them

Healthier Communities,  
Outstanding Care

---

**This leaflet aims to answer your questions about what the AMBER care bundle is. It will also explain how we use it to keep you informed about your condition and provide you with the best possible support with any decisions you need to make. If you have any further questions about the AMBER care bundle, then please speak to the doctor or nurse caring for you.**

### **What is the AMBER care bundle and who is it for?**

At Sherwood Forest Hospitals we aim to provide the highest standard of care for you and those important to you. It is important that you are involved with decisions about your care as much as you would like.

Sometimes, despite our best efforts, treatments do not give the results we would hope for, or we might be too unwell to have certain treatments and your recovery may be uncertain. In this situation the AMBER care bundle can make sure that the ward team including doctors, nurses and specialists know about your condition and are working together to give you the best possible care and support.

Some people receiving the AMBER care bundle may respond to treatment and recover from their current illness. Some people, however, may not respond to treatment and further discussions may be needed.

The AMBER care bundle is not about stopping your treatments but aims to keep you and those important to you informed about what is happening.

### **What are the benefits of the AMBER care bundle to patients?**

The AMBER care bundle will improve communication and decision making between patients, those important to them and the medical team providing their care. AMBER provides the opportunity for patients to be actively involved with discussions about their treatment. Patients are monitored closely and as these discussions take into account and consider the patient's wishes and preferences, it allows the team to respond quickly to any changes in the patient's condition.

### **What does being an AMBER patient mean?**

The medical team, including doctors and nurses will discuss whether a patient should be supported by the AMBER care bundle. They will agree the best treatment plan and will discuss this with the patient and with their consent with those important to them.

- Patients will be monitored closely daily allowing the medical team to respond quickly to any changes in their condition.
- Patients, with their consent and of those important to them, will be informed of any changes in their condition and treatment, so they can be actively involved in their care as part of individualised care planning.
- An opportunity will be given to discuss how and where you would like to be cared for in the future if you do not get better.
- Patients are encouraged to talk to the medical team about any personal wishes or concerns that they have.

AMBER patients may respond well to treatment and improve. However, as the recovery is uncertain the patient's condition can deteriorate further, and everyone needs to be prepared.

### **What happens if AMBER patients improve?**

If the patient improves and recovers, they may wish to go home or another place of care. This is an opportunity to talk about any help needed on discharge, future care, and should their health worsen again, their wishes and preferences. The team will discuss and support patients and those important to them with these discussions as much as desired.

### **What happens when AMBER patients don't respond to treatment or become worse?**

The ward team will explain and discuss any other possible treatments that may be appropriate. They may also talk about other options and about any future care wishes and plans. Medical treatment is only one part of care, and it's important that patients can discuss what's important to them. With the patient's permission, the team can discuss plans with those important to them.

### **When AMBER patients go home are their GPs informed?**

Yes. The ward team will inform a patient's GP about their admission. With permission, the ward team will share information about any future care preferences. This is important as it will help ensure that all health professions continue to meet the patient's needs once home.
